

MS09 VT09 FAQ Symptoms for Concern v1 540

[MUSIC]

Common things to watch for near the end of pregnancy are preterm labor, high blood pressure problems.

If you have any strange symptoms that are unusual for you: really severe headaches, vision changes, abdominal pains that don't seem right, nausea, vomiting that's restarted.

Or if the baby stops moving as much, that can be a sign of problems as well.

Certainly if you think you're in labor with more regular painful contractions, if you think your water has broken or if you are having any heavy vaginal bleeding, those are all things you should contact your doctor about.
