

## **MS03 VT14 FAQ Lack of Nausea v2 540p**

[Music]

For most women, early pregnancy is marked by nausea, fatigue, breast tenderness, perhaps needing to urinate more frequently.

So, those symptoms are not unique to every mother, but they're very common. So, if you have or do not have these symptoms, it does not mean that there will be a complication during your pregnancy.

I'm lucky enough not to really be having any early symptoms right now as far as morning sickness.

In the first trimester of this pregnancy, I only had about two days of nausea luckily.

We had heard all these stories about just an awful first three months of morning sickness, and it didn't happen at all for us. It's been a really easy pregnancy compared to friends.

## **MS03 VT14 FAQ Lack of Nausea v2 540p**

Each pregnancy varies from woman to woman. And for that individual woman, she may have variable signs and symptoms from one pregnancy to the next.

If you were lucky enough not to have those signs, great. You were born to do this and pregnancy suits you wonderfully. It doesn't mean there's a problem with the pregnancy. It means you're just very lucky.
